

Queue

- A data structure which follows **First-in** → **First-out** order when performing operations to its elements.

- What added first to the structure is removed first like a single-lane one-way road.

Basic Operations

- Initializing or defining the queue
- Utilizing it
- Completely erasing it from the memory
- **enqueue()** – add (store) an item to the queue.
- **dequeue()** – remove (access) an item from the queue.
